SUMMARY

Computer Science undergraduate skilled in Python, Java, full-stack development, and database systems. Experienced in building scalable web applications using JDBC, Servlets, PHP, and MySQL with strong problem-solving skills.

EDUCATION

SR University, Warangal

August 2023 – Present

Bachelor of Technology in Computer Science and Engineering | **CGPA: 9.6**

EXPERIENCE

Student Developer – SR University

- Contributed to the development and enhancement of a full-stack e-commerce website using PHP, JavaScript, and MySQL.
 - Implemented backend integrations and improved user experience through feature enhancements and debugging.
 - Collaborated with faculty mentors to translate business requirements into scalable web solutions.
-

PROJECTS

LeetSync

Tech Stack: JavaScript, Chrome Extensions API, GitHub REST API

- Chrome Extension automating LeetCode→GitHub sync via MutationObserver DOM scraping, GitHub REST API via Background Service Workers, auto-generating analytics dashboards.

Job Tracker Pro

Tech Stack: Java, JDBC, Servlets, MySQL, Apache Tomcat

- Built a full-stack job tracking system with role-based authentication and secure CRUD operations.
- Implemented MVC architecture and multi-user data isolation using JDBC and MySQL.
- Developed an admin dashboard with real-time application tracking features.

Online Saree Shopping Website

Tech Stack: HTML, CSS, JavaScript, PHP, MySQL

- Developed a responsive e-commerce platform with cart, wishlist, product filters, and checkout features.
- Introduced a new "Customization" feature** allowing users to personalize sarees based on color, fabric, and design preferences, enhancing user engagement and satisfaction.

Study Task Manager

Tech Stack: Java, Swing, Multithreading, File Handling

- Developed a desktop task management application using Java Swing.
- Implemented multithreaded reminders and persistent file storage.
- Applied OOP principles and modular architecture for maintainable design.

Smart Dustbin – Waste Classification System

- Designed a smart dustbin system for automated segregation of organic and inorganic waste.
 - Applied basic electronics and logical automation concepts to improve waste management efficiency.
-

TECHNICAL SKILLS

- Languages:** Python, Java, C, C++
 - Frontend:** HTML, CSS, JavaScript
 - Backend:** JDBC, Servlets, PHP, MVC Architecture
 - Databases:** MySQL
 - Tools:** Git, GitHub, VS Code
-

ACHIEVEMENTS

- Solved 250+ LeetCode problems
 - Maintained 9.6 CGPA in B.Tech CSE
-
